membrane metalloprotease designated neprilysine II (NEPII) gene. (AAZ28810). NEPII is involved in (in)activation of neuronal and hormonal peptide messengers. NEPII is used to screen for specific substrates (used to detect NEPII in cells and tissues) or inhibitors, which can also be used to detect NEPII or for treatment of disorders related to peptidergic signalling in which NEPII in involved, e.g. cardiovascular or

This sequence represents the gene for the rat membrane metalloprotease designated neprilysine II (NEPII), which is involved in (in)activation of neuronal and hormonal peptide messengers. NEPII is used to screen for specific substrates (used to detect NEPII in calls and tissues) or inhibitors, which can also be used to detect NEPII or for treatment of

New membrane metalloprotease NEP II, involved in proteolysis of neuronal and hormonal peptides, used to screen for inhibitors, potentially useful for treating e.g. cardiovascular disease

(e.g. female sexual arousal disorder (FSAD)). The SEP polypeptides are also useful for treating the above disorders and other disorders such as premature ejaculation, anorgasmia, sexual pain (e.g. vaginismus) and hypoactive sexual desire disorder. The present sequence is SEP consensus DNA sequence found in human, mouse and rat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              An isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase which is useful for treating sexual dysfunction, for e.g. male erectile dysfunction or female sexual dysfunction such as female sexual arousal disorder -
  disorders related to peptidergic signalling in which NEPII in involved, e.g. cardiovascular or neurodegenerative diseases; growth disorders of endocrine origin; disturbances of the hypothalamic-hypophyseal axis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Phillips SC;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase (SEP). The anti-SEP antibody and the compound which inhibits or selectively inhibits the human SEP protein are useful in the manufacture of a medicament for the prophylaxis and/or treatment of sexual dysfunction, in particular male erectile dysfunction (MED) or female sexual dysfunction (FSD)

The specification also describes NL-2 and NL-3. The NL enzymes are used to test for specific inhibitors. The N-terminal region of the enzymes can be used to promote production and secretion of foreign proteins and active biopeptides, using chimeric constructs containing the foreign protein downstream from and in phase with the N-terminal region. The NL enzymes are have been localised to the brain, and may be useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cDNA encoding neutral endopeptidase metallopeptidase-like enzyme NL-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          endopeptidase metallopeptidase-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   psychlatric disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and psychiatric disorders. NL enzymes have also been localised to the testis and ovaries, and may be used to control fertility. They have also been localised to bones, and may be used to treat bone diseases, and abnormal phosphate metabolisms related to improper peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       treatment of neurological diseases such as Alzheimer's disease, pain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel neutral endopeptidase-like metallopeptidase polypeptides and polynucleotides, used to screen for related sequences and enzyme inhibitors, used for the treatment of NL-3 related bone disorders

The invention relates to an isolated, enriched, or purified protease polypeptide (I) and polynucleotide (II) encoding (I). (I) may be used to screen for substances (S) that may modulate its activity. Administering S (which modulates protease activity in vitro) may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vasotropic; antimigrafie; analgesic; endocrine; nootropic; tranquiliser; hypotensive; neuroleptic; neuroprotective; anabolic; antilnflammatory; aspartyl protease; cysteine protease; metalloprotease; serine protease; chaematopoietic; breast; colon; lung; prostrate; cervical; brain; ovarian; bladder; kidney; pain; hamner-related disease; cardiovascular disease; neuronal disease; migralne; sexual dysfunction; mood disorder; attention disorder; cognition disorder; hypotension; hypertension; psychotic disorder;
                                                                                                     infarction, peripheral vascular disease, Rapaud's disease, kidney diseases, gastrointestinal disorders, motility disorders and conditions of delayed gastric emptying, post-operative or diabetic gastroparesis, diarrhoea, inflammations, chemotherapy induced injury, tumour invasion, immune disorders, arthritis, andotoxin shock, sepsis, complications of diabetes mellitus, and severe mental retardation and dyskinesias, such as Huntington's disease or Gilles de la Tourette's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel protease polypeptide useful for screening for substances that may be used to treat, e.g., cancers, immune-related diseases, cardiovascular disease, migraine, pain, psychotic and inflammatory

                                                                                                                                                                                                                                                CDS
       The present sequence encodes a human metalloprotease enzyme designated 1GS5. IGS5 polynucleotides and polypeptides are useful for treating infections, pain, cancer, diabetes, obesity, anorexia, bulimia, asthma, arkinson's disease, acute heart failure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, stroke, uleers, allergies, benign prostatic hypertrophy, migraine, psychotic and neurological disorders, autism, multiple sclerosis, alzahimer's disease, and other neurodegenerative diseases, sleep disorder, epilepsy, cardiovascular diseases, arteriosclerosis, cerebral ischemia, cerebral infarction, peripheral vascular disease, maying diseases, kidney diseases, gastrointestinal disorders, motility disorders and conditions of delayed gastric emptying, post-operative or diabetic gastroparesis, diarrhoea, inflammations, chemotherapy induced injury, tumour invasion, munume disorders, arthritis, endotoxin shock, sepsis, complications of diabetes mellitus, and severe mental retardation and dyskinesias, such

                                                   The present sequence is a nucleotide sequence coding for human SEP, a soluble secreted endopeptidase, with an additional 5' octor partial sequence. The invention relates to the use of an inhibitor of NPY, or an inhibitor of NPY is receptor, especially an inhibitor selective for an NPY or NPY II receptor, especially an inhibitor selective for an NPY or NPY II receptor, especially an endequent of prevention of male sexual dysfunction, especially male crectile dysfunction (MED). The NPY inhibitor may be used with an auxiliary active agent such as an SEP inhibitor. The invention contained as a SEP assay that can be used to detect candidate inhibitors of SEP. In addition to treatment of MED, NPY inhibitors can also be used to treatment of MED, NPY inhibitors can also be used to treat and metabolic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

New membrane-associated metallopeptidase SNEPa, SNEPb and SNEPc polypeptides and polynucleotides, useful for treating e.g. acute and chronic renal insufficiency, pain, stroke, cancer, inflammation, renal Culouscou J; Jagerschmidt A, Agnel M, WPI; 2001-212582/22. P-PSDB; AAB60562.

Claim 5; Page 30-33; 72pp; English.

and hepatic ischemia

WPI; 2001-212582/22. P-PSDB; AAB60563.

The invention relates to the human SNEPa, SNEPb and SNEPc proteins, and the CDNAs encoding them. SNEPa, SNEPb and SNEPc are neprilysin-like membrane metallopeptidases and are the products of alternative splicing. The substrate(s) for the SNEP proteins are not as yet known, although the neprilysin family of zinc endopeptidases play key roles in the processing and/or metabolism or neuropeptides and peptide hormones. SNEP concletides may be used as hybridisation probes for CDNA and genomic nucleotides may be used as hybridisation probes for CDNA and genomic SNEP or SNEP; to isolate full-length CDNAs and genomic clones encoding SNEPa, SNEP or SNEP or SNEP; to isolate CDNA and genomic clones of SNEP homologues; as research reagents and material for the discovery of treatments and diagnostics for animal and human diseases; and for chromosome identification. The SNEP proteins may be used as immunogens to produce antibodies immunospecific for SNEPa, SNEP or SNEP. Such protein, or to purify the proteins by affinity chromatography.

SNEP proteins may also be used in screening for compounds which modulate SNEP endopeptidase activity, and to assess enzymatic cleavage of small molecule substrates in cells, cell-free preparations, chemical libraries and product mixtures. The SNEP proteins (as vaccine compositions), disorder related to abnormal respiratory or hepatic diseases, they may also be used in modulating peptide activation and/or degradation in the brain or kidney or in another organ, or to diagnose or treat any disorder related to abnorm ischaemia, pain, stroke, hypertensive disease, cancer, inflammation, well as cardiovascular, neuronal, pancreatic, prostatic, renal, Proceedings, and SNEP activators or inhibitors may used treat acute and chronic renal insufficiency, renal and hepatic well as cardiovascular, SNEP

The invention relates to the human SNEPa, SNEPb and SNEPc proteins, and the cDNAs encoding them. SNEPa, SNEPb and SNEPc are neprilysin-like membrane metallopeptidases and are the products of alternative splicing. The substrate(s) for the SNEP proteins are not as yet known, although the neprilysin family of zinc endopeptidases play key roles in the processing and/or metabolism or neuropeptides and peptide hormones. SNEP nucleotides may be used as hybridisation probes for CDNA and genomic DNA; to isolate full-length cDNAs and genomic clones encoding SNEPa, as research reagents and material for the discovery of treatments and diagnostics for animal and human diseases; and for chromosome polypeptides and polynucleotides, useful for treating e.g. acute and chronic renal insufficiency, pain, stroke, cancer, inflammation, renal identification. The SNEP proteins may be used as immunogens to produce antibodies immunospecific for SNEPa. SNEPD. or SNEPc. Such antibodies are used to isolate or identify clones expressing the protein, or to purify the proteins by affinity chromatography. membrane-associated metallopeptidase SNEPa, SNEPb and SNEPc Claim 5; Page 35-38; 72pp; English. and hepatic ischemia

```
SNEP proteins may also be used in screening for compounds which modulate SNEP endopeptidase activity, and to assess enzymatic cleavage of small molecule substrates in cells, cell-free preparations, chemical libraries and product mixtures. The SNEP proteins (as vaccine compositions), SNEP nucleotides, and SNEP activators or inhibitors may used to treat acute and chronic renal insufficiency, renal and hepatic ischaemia, pain, stroke, hypertensive disease, cancer, inflammation, as well as cardiovascular, neuronal, pancreatic, prostatic, renal, respiratory or hepatic diseases, they may also be used in modulating peptide activation and/or degradation in the brain or kidney or in

                                                                                                                                                                                                                                                                                                                                                                        셤
```

The present sequence encodes a human neutral endopeptidase metallopeptidase-like enzyme, designated NL-2. The specification also describes NL-1 and NL-3. The NL enzymes are used to test for specific inhibitors. The N-terminal region of the enzymes can be used

Disclosure; Fig 4; 59pp; English.

```
SNEP
to promote production and secretion of foreign proteins and active biopeptides, using chimeric constructs containing the foreign protein downstream from and in phase with the N-terminal region. The NL enzymes are have been localised to the brain, and may be useful in the treatment of neurological diseases such as Alzheimer's disease, pain, and psychiatric disorders. NL enzymes have also been localised to the testis and ovaries, and may be used to control fertility. They have also been localised to bones, and may be used to treat bone diseases, and abnormal phosphate metabolisms related to improper peptide processing by the NL-3 enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the human SNEPa, SNEPb and SNEPc proteins, and the cDNAs encoding them. SNEPa, SNEPb and SNEPc are neprilysin-like membrane metallopeptidases and are the products of alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         analgesic;

NAME OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART OF THE PART O

The present sequence is a nucleotide sequence coding for human SEP, a soluble secreted endopeptidase. The invention relates to the use of an inhibitor, of NPY II receptor, especially an inhibitor selective for an NPY or NPY II receptor associated with male genitalia, in the preparation of a medicament for the treatment or prevention of male sexual dysfunction, especially male erectile dysfunction (MED). The NPY inhibitor may be used with an auxiliary active agent such as an SEP inhibitor. The invention provides a SEP assay that can be used to detect candidate inhibitors of SEP. In addition to treatment of MED, NPY inhibitors can also be used to treat abnormal drink and food intake disorders, such as obesity, bulimia, anorexia and

```
SMEPP or SNEPC; to isolate cDNA and genomic clones of SNEP homologues; as research reagents and material for the discovery of treatments and dagnostics for animal and human diseases; and for chromosome identification. The SNEP proteins may be used as immunogens to produce antibodies mmunospecific for SNEPa, SNEPD or SNEPC. Such protein, or to purify the proteins by affinity chromatography. SNEP endopeptidase activity, and to assess enzymatic cleavage of small molecule substrates in cells, cell-free preparations, chemical libraries and product mixtures. The SNEP proteins (as vaccine compositions), SNEP nucleotides, and SNEP proteins (as vaccine compositions), to treat acute and chronic renal insufficiency, renal and hepatic
                                                                                                                                                                                                                                                                                                                                                                                                                   propulate activation and/or degradation in the brain or kidney or in another organ, or to diagnose or treat any disorder related to abnormal expression of SNEPa, SNEPb or SNEPc. The present sequence represents cDNA encoding SNEPa.
                                                                                                                                                                                                                                                                                                                                                  ischaemia, pain, stroke, hypertensive disease, cancer, inflammation, as well as cardiovascular, neuronal, pancreatic, prostatic, renal, respiratory or hepatic diseases. they may also be used in modulating peptide activation and/or degradation in the brain or kidney or in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
  to isolate full-length cDNAs and genomic clones encoding SNEPa,

Vector DNA was prepared from a derivative of pWD42. (gil/4732114 gb).R123072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 purified. The sheared, adaptored mouse DNA was annealed to

primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TJ Close lab (Choi) at the University of California, Riverside. Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing) Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu. Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or abbove. For more details on library preparation and sequence analysis see http://www.genome.clemson.edu/projects/barley. To order

The tissue source for this library is xylem. The xylem tissue was harvested in spring and summer from branches of seed orchard trees which are clones of the same genotype. Branches were 4-6 inches in diameter. The CDNAS were directionally cloned into Lambda 2ap and were rescued as a Bluescript derivative in the EcoRI and XhoI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BM110208 689 bp mRNA 11near EST 26-NOV-2001

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
